

CAPTURE GIFT AID WITH CONTACTLESS DONATIONS

giftaid it

If your charity is taking contactless donations using our Payter devices for a cause which qualifies for Gift Aid recovery, we can now offer a solution to help you.

By registering their card with MyGivingHub, your donors could help you claim Gift Aid and benefit from the extra 25p on every £1 they donate.

Using QR Code technology we are able to offer donors using Payter, the option to register their UK taxpayer eligibility and agreement to recover Gift Aid. Once their registration is complete, all past and future donations will have Gift Aid eligibility confirmed on their behalf.

How It Works

1. Scan the QR Code

The donor scans the QR code using their mobile device. This will take them to a dedicated page on MyGivingHub where they will simply enter their email address.

2. Confirmation Email & Registration

A confirmation email is sent to the donor verifying the email address entered and with a link to complete the registration.

The donor completes the registration with their name and address details, confirms their eligibility and authority to reclaim Gift Aid and registers the credit/debit card they have just used to make a contactless donation.

3. Capture & Display Donations Made on The Card

Once the donor's card is registered, we are able to use the secure token generated to match against previous donations made on the card and display this to the donor and include the Gift Aid eligibility to you in your charity portal to claim in the normal way.

at MyGivingHub.com

Promote Registration to Claim Gift Aid

The QR code to register with MyGivingHub is standard and can be promoted in various ways:

You can include the QR code within your branding plate and promotional artwork

Stickers can be placed on the side of the devices.

A4/A5 flyers can be downloaded and printed to place in acrylic holders next to the Payter contactless terminal.

A4 artwork can be printed and laminated to create a mat and the Payter device can be placed on it with an A5 flyer placed next to the device.
